

Crescendo announces integration with iSOFT Synergy

Crescendo announces integration with iSoft's Premiere Synergy - a leader in GP surgeries clinical records system across the UK.

Sunbury-on-Thames, United Kingdom – April 6th, 2009 – Crescendo Systems announces integration with iSoft's Premiere Synergy, the clinical records system which is being used by a large number of GP surgeries across the UK. This extension to Crescendo's wide range of integration modules, proves again why Crescendo is becoming the UK's preferred choice for digital dictation and transcription needs.

By integrating with Synergy at the user's desktop, Crescendo's advanced **DigiDictate & DigiPlayer** applications can now pull and push Synergy patient demographics, eliminating the need for duplicate data input and unnecessary application switching.

"This integration with one of the UK's leading clinical records systems marks another step in Crescendo Systems' growth and establishment as a leading provider of unified medical systems" says Costa Mandilaras, president of Crescendo Systems, "GP surgeries accross the UK need to be able to integrate their patient records with the dictation voice files in a secure and reliable environment."

The new "one click" integration method will automatically start a new patient dictation and populate the patient name, date of birth and NHS number within the voice file. This provides detailed and accurate information for the transcriptionists to locate and transcribe patient letters. With an embedded link in each dictation to the originating patient record, there is no longer any need for manually looking up the patient in Synergy. Even when editing or re-transcribing previously created or typed dictations, the Crescendo applications will automatically locate the corresponding patient to save valuable dictation and transcription time.

About Synergy:

Synergy is an advanced system providing general practices with information to support their patient-related clinical and administrative processes. Clinical functionality includes consulting using problem-oriented medical records, prescribing backed by an industry standard clinical drug database, pathology results, chronic disease management using SOPHIE, dispensing, home visit support through handheld devices and sophisticated clinical decision support incorporating data-driven alerts. Administrative functionality includes registration links, appointments, reporting, scanning and integration with Microsoft Office.

About iSoft:

Today, over 13,000 healthcare provider organizations in 36 countries across five continents use iSOFT solutions to manage patient information and drive improvements in core processes. Our solutions are a catalyst for change, increasing efficiencies and providing direct benefits to all stakeholders across the whole spectrum of care. Our business is driven by the collective talent, experience and commitment of over 4,000 specialists around the globe. iSOFT became part of the IBA Health Group following a merger completed in October 2007.
