

# CRESCENDO CONNECT

## CENTRO 1.4 New Features DigiDictate Mobile Update New Offices

### CENTRO 1.4 - NEW FEATURES

- > Centro now supports Batch Sign-off, allowing the user to electronically sign multiple reports at once. The list of pending reports is displayed alongside a preview screen, enabling the user to review and sign off from a single location by simply inputting the password once. This is in addition to multi-level signatures, over the shoulder signing and factor-delayed approval, making Centro electronic documentation a must have for any clinical setting.
- > Navigating Quickforms with Crescendo Speech has never been easier. The user can now simply speak the name of the control to change focus to it, eliminating the need to use the next/previous marker commands or a mouse and keyboard. Crescendo Speech with form control and navigation offers a 99.5% recognition rate for any speaker.
- > Another notable feature within Crescendo Speech is auto-skip, which automatically moves the cursor to the next field once the value has been received from the speech recognition server, saving time and improving flow of the dictation.
- > Easily replicate a facility's paper forms, ensuring little to no adjustment period for the user. Boxes and tables are now arranged in the same format as their hardcopy predecessors, with the ability to configure navigation vertically or horizontally, depending on preference. Historical data can automatically be imported into the document, eliminating the input of duplicate information.
- > Centro users can now change their own electronic signature passwords, eliminating the need to request the change from a supervisor and ensuring the password is shared with no one.
- > Centro now supports SpeechMike Premium and SpeechMike Air allowing total user configuration of all the controls and function keys on these devices.

"I am very pleased with the significant progress we've made with digital dictation. This really facilitates our administrative tasks which were already overloaded. I love the instant delivery of dictations to our secretary, I can even dictate my letters in the operating room between surgeries."

Dr. C. Ursu, *Pediatric Orthopedic Surgeon  
Fondation Hopale - Berck-sur-mer, France*  
on his experience with DigiDictate Mobile
