

CRESCENDO CONNECT

CENTRO 1.3 Release Notes

Centro clinical documentation system
Release date June 9, 2014

NEW FEATURES

- > It is now possible to navigate and input data into Quickforms by using Crescendo Speech. The speed of dictation is increased and the collection of data is simplified. Using this input method allows physicians to dictate grouped fields in any order.
- > Communication between Centro users is now possible through an integrated Messaging feature which allows notes to be left for those with access to the report. For instance, a note can be left for a physician if a report is unclear. The feature aims to simplify communication between the healthcare team, while centralizing all discussion about a patient, eliminating the need for less secure modes of interaction.
- > The Centro Web application allows physicians the freedom to view, modify and sign-off reports remotely. Table input is now available to ensure accurate quick touch entry of standard data via the web (such as medications, vital signs, HPI).
- > It is now possible to change the appointed co-signer in the event the original chosen co-signer is unavailable; ensuring the completed report is accessible in a timely manner without any unnecessary delays.
- > Inherited text or sections added by other authors are now attributed as such by a stamp indicating the data creation information, ensuring the data can be traced to the original user and the date and time it was generated. Text produced by another author remains unchangeable.
- > Centro can now automatically import images from digital imaging devices such as a portable ultrasound machine, providing support for visual cues and eliminating paper output, ensuring the electronic image becomes part of the patient's chart in a single step.

Did you know?

Quickforms ensure data is organized and oblige the user to ask certain questions during an exam, almost like telling a story. Because input is controlled, the document is not lacking any data which can adversely affect patient care, making Quickforms with Crescendo Speech the perfect tool for teaching environments. By eliminating the high licensing fees for third party vendor systems, Crescendo Speech makes Speech Recognition accessible to everyone. As a bonus, both Crescendo Speech and SpeechMagic 7 can be used on the same system.

ENHANCEMENTS

- > Initial configuration of the system is now simplified with the ability to define privileges and restrict access by departments and report types based on roles.
- > SpeechMagic 7 Release 4 Fix Pack 3 is now supported for both front and back end speech recognition.
- > During the report creation process, the author is presented with a warning if the selected subject has the same name as another patient in the doctor's "To-Do List" ensuring the correct individual is selected and avoiding possible medical errors.
- > Crescendo Speech and SpeechMagic 7 can both run simultaneously on the same Citrix server.
- > It is now possible to view details added to a summary table item directly in the main summary screen.
